**Saugus High School**  
**Saugus, MA 01906**

Week 1	
<b>Performance Standards</b>	
<i>The students will:</i>	
<b>Unit/Topic./Lesson</b>	
Introduction Physics – The Basic Science	
<b>Objectives (Students Will...)</b> <ul style="list-style-type: none"> <li>• <b>Explain</b> why physics is the basic science</li> <li>• <b>Outline</b> scientific methods</li> <li>• <b>Distinguish</b> among observations, facts, hypotheses, laws, and principles</li> <li>• <b>Describe</b> circumstances under which a hypothesis or law must be changed or abandoned</li> <li>• <b>Distinguish</b> between the everyday meaning and the scientific meaning of theory and <b>explain</b> why the refinement of theories is a strength in science</li> <li>• <b>Distinguish</b> between a hypothesis that is scientific and one that is not</li> <li>• <b>Distinguish</b> between science and technology</li> </ul>	<b>Essential Question</b> What is physics?
<b>Labs/Demonstrations/Handouts</b>	
<b>Handout:</b> Syllabus	
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 1</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 1 Review Chapter 1 Problems	<b>Completed by:</b>
	<b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 2	
<b>Performance Standards</b>	
<b>Physics 1.1 – Distinguish</b> between vector quantities (such as displacement, velocity, acceleration, weight, and linear momentum) and scalar quantities (such as distance, speed, energy, mass, and work).	
<b>Physics 1.2 – Distinguish</b> between displacement, distance, velocity, speed, and acceleration. <b>Solve</b> problems involving displacement, distance, velocity, speed, and constant acceleration.	
<b>Physics 1.3 – Create</b> and <b>interpret</b> graphs of 1-dimensional motion, such as position vs. time, distance vs. time, speed vs. time, velocity vs. time, and constant acceleration vs. time	
<b>Unit/Topic./Lesson</b>	
Linear Motion Relative motion Speed Velocity	
<b>Objectives (Students Will...)</b> <p><b>Explain</b> the idea that motion is relative  <b>Define</b> speed and <b>distinguish</b> between instantaneous speed and average speed  <b>Distinguish</b> between speed and velocity, and <b>describe</b> how to tell whether a velocity is changing  <b>Define</b> acceleration and give examples of its units  <b>Describe</b> the motion of free fall  <b>Describe</b> the motion of an object thrown straight up and allowed to fall until it hits the ground  <b>Determine</b> the speed and the distance fallen at any time after an object is dropped from rest, when air resistance is negligible</p>	<b>Essential Question</b> What is the difference between speed, velocity, and acceleration?
<b>Labs/Demonstrations/Handouts</b>	
<b>Lab:</b> Whirligigs <b>Demos:</b> Free fall	
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 2</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 2 Review Chapter 2 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 2 Worksheets Lab Report	<b>Completed by:</b>
	<b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 3	
<b>Performance Standards</b>	
<p><b>Physics 1.1 – Distinguish</b> between vector quantities (such as displacement, velocity, acceleration, weight, and linear momentum) and scalar quantities (such as distance, speed, energy, mass, and work).</p> <p><b>Physics 1.2 – Distinguish</b> between displacement, distance, velocity, speed, and acceleration. <b>Solve</b> problems involving displacement, distance, velocity, speed, and constant acceleration.</p> <p><b>Physics 1.3 – Create</b> and <b>interpret</b> graphs of 1-dimensional motion, such as position vs. time, distance vs. time, speed vs. time, velocity vs. time, and constant acceleration vs. time</p>	
<b>Unit/Topic./Lesson</b>	
Linear Motion Acceleration Air resistance	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Explain</b> how graphs can be used to describe relationships among time, distance, and speed</p> <p><b>Describe</b> how air resistance affects the motion of falling objects</p> <p><b>Explain</b> why acceleration is a rate of a rate</p>	What is a vector?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Lab:</b> How fast?
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 2</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 2 Review Chapter 2 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 2 Worksheets Lab Report	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 4	
<b>Performance Standards</b>	
<p><b>Physics 1.1 – Distinguish</b> between vector quantities (such as displacement, velocity, acceleration, weight, and linear momentum) and scalar quantities (such as distance, speed, energy, mass, and work).</p> <p><b>Physics 1.2 – Distinguish</b> between displacement, distance, velocity, speed, and acceleration. <b>Solve</b> problems involving displacement, distance, velocity, speed, and constant acceleration.</p>	
<b>Unit/Topic./Lesson</b>	
Projectile motion Vectors Scalars	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Distinguish</b> between a vector quantity and a scalar quantity, and <b>give</b> examples of each</p> <p><b>Draw</b> vector diagrams for velocities and <b>use</b> the parallelogram method to find the resultant of two vectors that have different directions</p> <p>Given a vector, <b>resolve</b> it into horizontal and vertical components</p>	At which point in its path does a projectile have minimum speed?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Lab:</b> Merrily we roll along <b>Demos:</b> Projectiles
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 3</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 3 Review Chapter 3 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 3 Worksheets Lab Report	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 5	
<b>Performance Standards</b>	
<p><b>Physics 1.1 – Distinguish</b> between vector quantities (such as displacement, velocity, acceleration, weight, and linear momentum) and scalar quantities (such as distance, speed, energy, mass, and work).</p> <p><b>Physics 1.2 – Distinguish</b> between displacement, distance, velocity, speed, and acceleration. <b>Solve</b> problems involving displacement, distance, velocity, speed, and constant acceleration.</p>	
<b>Unit/Topic./Lesson</b>	
Projectile motion Parallelogram method (components and resultants) Satellites	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
For a projectile, <b>describe</b> the changes in the horizontal and vertical components of its velocity, when air resistance is negligible <b>Explain</b> why a projectile moves equal distances horizontally in equal time intervals, when air resistance is negligible <b>Describe</b> satellites as fast-moving projectiles	What is a projectile?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 3</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 3 Review Chapter 3 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 3 Worksheets Test: Chapter 2 & 3	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 6	
<b>Performance Standards</b>	
<p><b>Physics 1.1 – Distinguish</b> between vector quantities (such as displacement, velocity, acceleration, weight, and linear momentum) and scalar quantities (such as distance, speed, energy, mass, and work).</p> <p><b>Physics 1.4 – Demonstrate</b> an operational understanding of Newton’s three laws of motion.</p> <p><b>Physics 1.5 – Use</b> a free-body force diagram to show forces acting on a system consisting of a pair of interacting objects. For a diagram of only co-linear forces, <b>determine</b> the net force acting on a system and between the objects.</p>	
<b>Unit/Topic./Lesson</b>	
Newton’s 1 <sup>st</sup> Law of Motion – Inertia Galileo – ramps Inertia Net force Equilibrium Vector addition of forces	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> Aristotle’s concepts of natural and violent motion</p> <p><b>Describe</b> Copernicus’ idea about Earth’s motion</p> <p><b>Describe</b> Galileo’s contribution to the science of motion</p> <p><b>State</b> Newton’s first law of motion</p> <p><b>Distinguish</b> among mass, volume, and weight, and their units of measurement</p> <p><b>Explain</b> how something that is not connected to the ground is able to keep up with the moving Earth</p> <p><b>Explain</b> why a clothesline or wire that can easily support an object when strung vertically may break when strung horizontally and supporting the same object</p> <p><b>Describe</b> how the angle between vectors affects their resultant vector</p>	What is Newton’s first law of motion?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 4</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 4 Review Chapter 4 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 4 Worksheets	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 7	
<b>Performance Standards</b>	
<p><b>Physics 1.1 – Distinguish</b> between vector quantities (such as displacement, velocity, acceleration, weight, and linear momentum) and scalar quantities (such as distance, speed, energy, mass, and work).</p> <p><b>Physics 1.2 – Distinguish</b> between displacement, distance, velocity, speed, and acceleration. <b>Solve</b> problems involving displacement, distance, velocity, speed, and constant acceleration.</p> <p><b>Physics 1.4 – Demonstrate</b> an operational understanding of Newton’s three laws of motion.</p> <p><b>Physics 1.5 – Use</b> a free-body force diagram to show forces acting on a system consisting of a pair of interacting objects. For a diagram of only co-linear forces, <b>determine</b> the net force acting on a system and between the objects.</p> <p><b>Physics 1.6 – Describe</b> a simple model for frictional force, including static and kinetic friction</p>	
<b>Unit/Topic./Lesson</b>	
Newton’s 2 <sup>nd</sup> Law of Motion – Force and Acceleration Force causes acceleration Mass resists acceleration Newton’s 2 <sup>nd</sup> Law $a=F/m$ Friction Pressure Free fall and Newton’s 2 <sup>nd</sup> Law Falling and air resistance	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>State</b> the relationship between acceleration and net force</p> <p><b>State</b> the relationship between acceleration and mass</p> <p><b>State</b> and <b>explain</b> Newton’s second law of motion</p> <p><b>Describe</b> the effect of friction on stationary and on moving objects</p> <p><b>Distinguish</b> between force and pressure</p> <p><b>Explain</b> why the acceleration of an object in free fall does not depend upon the mass of the object</p> <p><b>Describe</b> the effect of air resistance on a falling object</p>	What is Newton’s third law of motion?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Labs:</b> Friction
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 5</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 5 Review Chapter 5 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 5 Worksheets Lab report	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 8	
<b>Performance Standards</b>	
<p><b>Physics 1.1 – Distinguish</b> between vector quantities (such as displacement, velocity, acceleration, weight, and linear momentum) and scalar quantities (such as distance, speed, energy, mass, and work).</p> <p><b>Physics 1.4 – Demonstrate</b> an operational understanding of Newton’s three laws of motion.</p> <p><b>Physics 1.5 – Use</b> a free-body force diagram to show forces acting on a system consisting of a pair of interacting objects. For a diagram of only co-linear forces, <b>determine</b> the net force acting on a system and between the objects.</p>	
<b>Unit/Topic./Lesson</b>	
Newton’s 3 <sup>rd</sup> Law of Motions – Action and Reaction Forces and interactions Identifying action and reaction (ex: gun, rocket) Action and reaction cancel?	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Define</b> force as part of an interaction</p> <p><b>State</b> Newton’s third law of motion            Given an action force, <b>identify</b> the reaction force</p> <p><b>Explain</b> why the acceleration caused by an action force and by a reaction force do not have to be equal</p> <p><b>Explain</b> why an action force is not cancelled by the reaction force</p> <p><b>Describe</b> the horse-cart problem</p> <p><b>Explain</b> why you cannot touch without being touched</p>	What is Newton’s third law of motion?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Demo:</b> Newton’s 3 <sup>rd</sup> Law (fan cart)
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 6</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 6 Review Chapter 6 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 6 Worksheets Test: Chapter 4, 5 & 6	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 9		Week 10	
<p align="center"><b>Performance Standards</b></p> <p><b>Physics 1.1 – Distinguish</b> between vector quantities (such as displacement, velocity, acceleration, weight, and linear momentum) and scalar quantities (such as distance, speed, energy, mass, and work).</p> <p><b>Physics 2.5 – Interpret</b> and provide examples that linear momentum is the product of mass and velocity and can be conserved (law of conservation of momentum). <b>Calculate</b> the momentum of an object.</p>		<p align="center"><b>Performance Standards</b></p> <p><b>Physics 2.1 – Interpret</b> and provide examples that illustrate the law of conservation of energy.</p> <p><b>Physics 2.2 – Interpret</b> and provide examples of how energy can be converted from gravitational potential energy to kinetic energy and vice versa.</p> <p><b>Physics 2.3 – Describe</b> both conceptually and quantitatively how work can be expressed as a change in mechanical energy.</p> <p><b>Physics 2.4 – Describe</b> both conceptually and quantitatively the concept of power as work done per unit time.</p>	
<p align="center"><b>Unit/Topic./Lesson</b></p> <p>Momentum Impulse – large time vs. large force (ex: bungee jump) Bouncing Conservation of momentum (ex: gun) Collisions (elastic/inelastic)</p>		<p align="center"><b>Unit/Topic./Lesson</b></p> <p>Energy Work Power Mechanical energy Potential energy Kinetic energy Conservation of energy Efficiency</p>	
<p align="center"><b>Objectives (Students Will...)</b></p> <p><b>Define</b> momentum <b>Define</b> impulse and describe how it affects changes in momentum <b>Explain</b> why an impulse is greater when an object bounces than when the same object comes to a sudden stop <b>State</b> the law of conservation of momentum <b>Distinguish</b> between an elastic collision and an inelastic collision <b>Give</b> an example of how the vector nature of momentum affects the law of conservation of momentum</p>	<p align="center"><b>Essential Question</b></p> <p>What is momentum?</p>	<p align="center"><b>Objectives (Students Will...)</b></p> <p><b>Define and describe</b> work <b>Define and describe</b> power <b>Define</b> mechanical energy <b>Define</b> potential energy <b>Define</b> kinetic energy and <b>describe</b> the work-energy theorem <b>State</b> the law of conservation of energy</p>	<p align="center"><b>Essential Question</b></p> <p>What is energy?</p>

Week 11	
<b>Performance Standards</b>	
<p><b>Physics 2.1 – Interpret</b> and provide examples that illustrate the law of conservation of energy.</p> <p><b>Physics 2.2 – Interpret</b> and provide examples of how energy can be converted from gravitational potential energy to kinetic energy and vice versa.</p> <p><b>Physics 2.3 – Describe</b> both conceptually and quantitatively how work can be expressed as a change in mechanical energy.</p> <p><b>Physics 2.4 – Describe</b> both conceptually and quantitatively the concept of power as work done per unit time.</p>	
<b>Unit/Topic./Lesson</b>	
Energy Efficiency	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> simple machines and mechanical advantage</p> <p><b>Explain</b> why no machine can have an efficiency of 100%</p> <p><b>Describe</b> the role of energy in living organisms</p>	What are simple machines?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 8</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 8 Review Chapter 8 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 8 Worksheets Test: Chapter 7 & 8	<p><b>Completed by:</b></p> <p><b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster</p>

Week 12	
<b>Performance Standards</b>	
<p><b>Physics 1.8 – Describe</b> conceptually the forces involved in circular motion.</p>	
<b>Unit/Topic./Lesson</b>	
Circular motion Rotational speed Centripetal force Centrifugal force Simulated gravity	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Distinguish</b> between <i>rotate</i> and <i>revolve</i></p> <p><b>Describe</b> rotational speed</p> <p><b>Give examples</b> of centripetal force</p> <p><b>Describe</b> the motion of an object if the centripetal force acting on a string ceases</p> <p><b>Explain</b> why centrifugal force is “fictitious”</p> <p><b>Describe</b> how a simulated gravitational acceleration can be produced</p>	What type of force causes an object to follow a circular path?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Lab:</b> Round and Round we go
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 9</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 9 Review Chapter 9 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 9 Worksheets Lab report	<p><b>Completed by:</b></p> <p><b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster</p>

Week 13		Week 14	
<i>Performance Standards</i>		<i>Performance Standards</i>	
		<p><b>Physics 1.8 – Describe</b> conceptually the forces involved in circular motion.</p> <p><b>Physics 2.5 – Interpret</b> and provide examples that linear momentum is the product of mass and velocity and is always conserved (law of conservation of momentum). <b>Calculate</b> the momentum of an object.</p>	
<b>Unit/Topic./Lesson</b>		<b>Unit/Topic./Lesson</b>	
Center of gravity Center of mass		Rotational mechanics Torque Balancing torques	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>	<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> center of gravity</p> <p><b>Describe</b> center of mass</p> <p><b>Describe</b> how to find the center of gravity of an irregularly shaped object</p> <p><b>Describe</b> how to predict whether an object will topple</p> <p><b>Distinguish</b> among stable equilibrium, unstable equilibrium, and neutral equilibrium</p> <p><b>Give</b> examples of how people are affected by their centers of gravity</p>	Where is the center of mass in a donut?	<p><b>Define</b> and <b>describe</b> torque</p> <p><b>Describe</b> the condition required for one torque to balance another</p> <p>Given the location of the center of gravity of an object and the position and direction of the forces on it, <b>tell</b> whether the forces will produce rotation</p>	What is torque?
	<b>Labs/Demonstrations/Handouts</b>		<b>Labs/Demonstrations/Handouts</b>
	<b>Demo:</b> Toppling, beaker		<b>Lab:</b> Torque Feeler activity/Keeping in balance <b>Demo:</b> Conservation of angular momentum

	<b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster		<b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 15	
<b>Performance Standards</b>	
<p><b>Physics 1.8 – Describe</b> conceptually the forces involved in circular motion.</p> <p><b>Physics 2.5 – Interpret</b> and provide examples that linear momentum is the product of mass and velocity and is always conserved (law of conservation of momentum). <b>Calculate</b> the momentum of an object.</p>	
<b>Unit/Topic./Lesson</b>	
Rotational mechanics Rotational inertia Angular momentum	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> on what the rotational inertia of an object depends</p> <p><b>Give</b> examples of how a gymnast changes the rotational inertia of the body in order to change the spin rate</p> <p><b>Define</b> angular momentum and <b>describe</b> the conditions under which it (a) remains the same and (b) changes</p> <p><b>Give</b> an example in which rotational speed changes but angular momentum does not</p>	What is rotational inertia?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 11</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 11 Review Chapter 11 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 11 Worksheets Test: Chapter 9, 10 & 11	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 16	
<b>Performance Standards</b>	
<p><b>Physics 1.7 – Describe</b> Newton’s law of universal gravitation in terms of the attraction between two objects, and the distance between them.</p>	
<b>Unit/Topic./Lesson</b>	
Universal gravitation Falling apple/moon/earth Newton’s Law of Universal Gravitation Inverse square law	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Explain</b> Newton’s idea of why the apple falls to Earth</p> <p><b>Explain</b> why the moon does not fall to Earth</p> <p><b>Explain</b> how Earth is falling</p> <p><b>State</b> Newton’s law of universal gravitation</p> <p><b>Explain</b> the significance of an inverse-square law</p> <p><b>Explain</b> the connection between gravitation and the idea that the universe may stop expanding and begin to contract</p>	What is Newton’s law of universal gravitation?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 12</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 12 Review Chapter 12 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 12 Worksheets	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 17	
<b>Performance Standards</b>	
<p><b>Physics 1.7 – Describe</b> Newton’s law of universal gravitation in terms of the attraction between two objects, and the distance between them.</p>	
<b>Unit/Topic./Lesson</b>	
Gravitational interactions Gravitational fields Gravitational field inside a planet (jumping through) Ocean tides Black holes	
<b>Objectives (Students Will...)</b> <b>Describe</b> the gravitational field outside Earth <b>Describe</b> the gravitational field inside Earth <b>Explain</b> why an astronaut in Earth orbit seems weightless even though there is a gravitational force <b>Explain</b> ocean tides <b>Give examples</b> of tides other than those in water <b>Describe</b> black holes	<b>Essential Question</b> What is a gravitational field?  <b>Labs/Demonstrations/Handouts</b> <b>Demo:</b> Weight and weightlessness
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 13</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 13 Review Chapter 13 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 13 Worksheets	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 18	
<b>Performance Standards</b>	
<p><b>Physics 1.7 – Describe</b> Newton’s law of universal gravitation in terms of the attraction between two objects, and the distance between them.</p> <p><b>Physics 1.8 – Describe</b> conceptually the forces involved in circular motion.</p> <p><b>Physics 2.1 – Interpret</b> and provide examples that illustrate the law of conservation of energy.</p> <p><b>Physics 2.2 – Interpret</b> and provide examples of how energy can be converted from gravitational potential energy to kinetic energy and vice versa.</p>	
<b>Unit/Topic./Lesson</b>	
Satellite motion Earth satellites Circular orbits Elliptical orbits Energy conservation Escape speed	
<b>Objectives (Students Will...)</b> <b>Explain</b> how the speed of a satellite in circular orbit around Earth is related to the distance an object falls in the first second due to gravity <b>Explain</b> why the force of gravity does not cause a change in the speed of a satellite in circular orbit <b>Describe</b> how the speed of a satellite changes in different portions of an elliptical orbit <b>Apply</b> the law of conservation of energy to <b>describe</b> changes in the PE and KE of a satellite in different portions of an elliptical orbit <b>Determine</b> the vertical speed required to ensure a projectile can “escape” Earth	<b>Essential Question</b> What is a satellite?  <b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 14</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 14 Review Chapter 14 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 14 Worksheets Test: Chapter 12, 13 & 14	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 19	
<b>Performance Standards</b>	
<p><b>Physics 3.2 – Explain</b> how heat energy will move from a higher temperature to a lower temperature until equilibrium is reached.</p> <p><b>Physics 3.3 – Describe</b> the relationship between average molecular kinetic energy and temperature. <b>Recognize</b> that energy is absorbed when a substance changes from a solid to a liquid to a gas, and that energy is released when a substance changes from a gas to a liquid to a solid. <b>Explain</b> the relationships between evaporation, condensation, cooling, and warming.</p> <p><b>Physics 3.4 – Explain</b> the relationship among temperature change in a substance for a given amount of heat transferred, the amount (mass) of the substance, and the specific heat of the substance.</p>	
<b>Unit/Topic./Lesson</b>	
Temperature, Heat, and Expansion Temperature Heat Thermal Equilibrium Internal Energy Measurement of Heat Specific Heat Capacity → water Expansion of water	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Define</b> temperature in terms of KE and describe the common temperature scales</p> <p><b>Define</b> heat</p> <p><b>Define</b> thermal equilibrium</p> <p><b>Distinguish</b> between internal energy and heat</p> <p><b>Describe</b> how the quantity of heat that enters or leaves a substance is measured</p> <p><b>Compare</b> the specific heat capacities of different substances</p> <p><b>Describe</b> how water’s high specific heat capacity affects climate</p> <p><b>Give</b> examples and applications of thermal expansion of solids</p> <p><b>Describe</b> the behavior of water as it is heated from 0°C to 15°C</p> <p><b>Explain</b> conduction and its effects</p>	What is heat?
	<b>Labs/Demonstrations/Handouts</b>
	<p><b>Labs:</b> Specific Heat</p> <p><b>Demo:</b> Thermal expansion</p>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 21</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 21 Review Chapter 21 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 21 Worksheets Lab report	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 20	
<b>Performance Standards</b>	
<p><b>Physics 3.1 – Explain</b> how heat energy is transferred by convection, conduction, and/or radiation.</p> <p><b>Physics 3.2 – Explain</b> how heat energy will move from a higher temperature to a lower temperature until equilibrium is reached.</p>	
<b>Unit/Topic./Lesson</b>	
Heat Transfer Absorption of radiant energy Emission of radiant energy Newton’s Law of Cooling Greenhouse effect	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Distinguish</b> between conduction and convection</p> <p><b>Explain</b> how heat can be transmitted through empty space</p> <p>Given the color and shininess of two object, <b>predict</b> which is likely to absorb radiant energy more easily</p> <p><b>Compare</b> the ability of an object to emit radiant energy with its ability to absorb radiant energy</p> <p><b>Relate</b> the temperature difference between an object and its surroundings to the rate at which it cools</p> <p><b>Describe</b> global warming and Earth’s greenhouse effect</p>	
	<b>Labs/Demonstrations/Handouts</b>
	<p><b>Demo:</b> Conduction, Convection and Radiation</p>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 22</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 22 Review Chapter 22 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 22 Worksheets	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 21	
<b>Performance Standards</b>	
<p><b>Physics 3.3 – Describe</b> the relationship between average molecular kinetic energy and temperature. <b>Recognize</b> that energy is absorbed when a substance changes from a solid to a liquid to a gas, and that energy is released when a substance changes from a gas to a liquid to a solid. <b>Explain</b> the relationships between evaporation, condensation, cooling, and warming.</p>	
<b>Unit/Topic./Lesson</b>	
Change of Phase Evaporation Condensation Boiling Freezing Energy and Changes of phase Heating/Cooling curves	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Explain</b> why evaporation of water is a cooling process</p> <p><b>Explain</b> why condensation is a warming process</p> <p><b>Explain</b> why a person with wet skin feels chillier in dry air than in moist air at the same temperature</p> <p><b>Distinguish</b> between evaporation and boiling and explain why food cooked in boiling water takes longer to cook at high altitudes</p> <p><b>Explain</b> why water with substances dissolved in it freezes at a lower temperature than pure water</p> <p><b>Describe</b> how something can boil and freeze at the same time</p> <p><b>Describe</b> how ice melts under pressure and refreezes when the pressure is removed</p> <p><b>Describe</b> how a substance can absorb or release energy with no resulting change in temperature</p>	<p>How is heat energy related to phase changes?</p>
	<b>Labs/Demonstrations/Handouts</b>
	<p><b>Lab:</b> Freezing Good Time</p>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 23</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 23 Review Chapter 23 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 23 Worksheets Lab report Test: Chapter 21, 22 & 23	<p><b>Completed by:</b></p> <p><b>Comments: <i>Alternative Evaluation:</i></b>            Paper, Project, Poster</p>

Week 22	
<b>Performance Standards</b>	
<p><b>Physics 4.1 – Describe</b> the measurable properties of waves (velocity, frequency, wavelength, amplitude, period) and <b>explain</b> the relationships among them. <b>Describe</b> a simple harmonic motion.</p> <p><b>Physics 4.2 – Distinguish</b> between mechanical and electromagnetic waves.</p> <p><b>Physics 4.3 – Distinguish</b> between two types of mechanical waves, transverse and longitudinal.</p> <p><b>Physics 4.6 – Interpret</b> graphs of constructive and destructive interference of waves.</p>	
<b>Unit/Topic./Lesson</b>	
Vibrations and Waves Vibration of a Pendulum Wave description, Wave motion, Wave speed Transverse waves Longitudinal waves Interference The Doppler Effect Bow waves Shock waves	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> the period of a pendulum</p> <p><b>Describe</b> the characteristics and properties of waves</p> <p><b>Describe</b> wave motion</p> <p><b>Describe</b> factors that affect the speed of a wave</p> <p><b>Distinguish</b> between transverse and longitudinal waves</p> <p><b>Distinguish</b> between constructive and destructive interference</p> <p><b>Describe</b> how a standing wave occurs</p> <p><b>Describe</b> the Doppler effect for sound and relate it to the blue and red shifts for light</p> <p><b>Describe</b> bow waves</p> <p><b>Describe</b> sonic booms</p>	<p>What is a wave?</p>
	<b>Labs/Demonstrations/Handouts</b>
	<p><b>Lab:</b> Pendulum</p> <p><b>Demo:</b> Standing waves</p>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 25</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 25 Review Chapter 25 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 25 Worksheets	<p><b>Completed by:</b></p> <p><b>Comments: <i>Alternative Evaluation:</i></b>            Paper, Project, Poster</p>

Week 23	
<b>Performance Standards</b>	
<p><b>Physics 4.1 – Describe</b> the measurable properties of waves (velocity, frequency, wavelength, amplitude, and period) and explain the relationship among them. <b>Recognize</b> examples of simple harmonic motion.</p> <p><b>Physics 4.2 – Distinguish</b> between mechanical and electromagnetic waves.</p> <p><b>Physics 4.3 – Distinguish</b> between two types of mechanical waves, transverse and longitudinal.</p> <p><b>Physics 4.5 – Recognize</b> that mechanical waves generally move faster through a solid than through a liquid and faster through a liquid than through a gas.</p>	
<b>Unit/Topic./Lesson</b>	
Sound The Origin of Sound Sound in Air Media that transmit sound Speed of sound Loudness Forced vibration Natural frequency Interference Beats	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Relate</b> the pitch of a sound to its frequency</p> <p><b>Describe</b> the movement of sound through air</p> <p><b>Compare</b> the transmission of sound through air with that through solids, liquids, and a vacuum</p> <p><b>Describe</b> factors that affect the speed of sound</p> <p><b>Describe</b> loudness and sound intensity</p> <p><b>Give</b> examples of forced vibration</p> <p><b>Describe</b> natural frequency</p> <p><b>Describe</b> resonance</p> <p><b>Describe</b> how sound waves interfere with on another</p> <p><b>Describe</b> beats</p>	What is a sound wave?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Demo:</b> Resonance
<b>Teacher Resources</b>	<b>Media Resources</b>

Chapter 26 Review Chapter 26 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 26 Worksheets Test: Chapter 25 & 26	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 24	
<b>Performance Standards</b>	
<p><b>Physics 4.1 – Describe</b> the measurable properties of waves (velocity, frequency, wavelength, amplitude, and period) and explain the relationship among them. <b>Recognize</b> examples of simple harmonic motion.</p> <p><b>Physics 4.2 – Distinguish</b> between mechanical and electromagnetic waves.</p> <p><b>Physics 6.1 – Recognize</b> that electromagnetic waves are transverse waves and travel at the speed of light through a vacuum.</p> <p><b>Physics 6.2 – Describe</b> the electromagnetic spectrum in terms of frequency and wavelength and identify the location of radio waves, microwaves, infrared radiation, visible light, ultraviolet rays, x-rays, and gamma rays on the spectrum.</p>	
<b>Unit/Topic./Lesson</b>	
Light Early concepts of light The speed of light Electromagnetic waves Light and Transparent materials Opaque materials Shadows	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> the dual nature of light</p> <p><b>Explain</b> why it is difficult to measure the speed of light</p> <p><b>Describe</b> the relationship among light, radio waves, microwaves, and X-rays</p> <p><b>Explain</b> how the frequency of light affects what happens when it enters a substance</p> <p><b>Describe</b> opaque materials</p> <p><b>Describe</b> solar and lunar eclipses</p> <p><b>Describe</b> the evidence that suggests that light waves are transverse</p> <p><b>Describe</b> 3-D vision</p>	What is light?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Demo:</b> Polarization
<b>Teacher Resources</b>	<b>Media Resources</b>

Chapter 27 Review Chapter 27 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 27 Worksheets	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 25	
<b>Performance Standards</b>	
<p><b>Physics 4.1 – Describe</b> the measurable properties of waves (velocity, frequency, wavelength, amplitude, and period) and <b>explain</b> the relationship among them. Recognize examples of simple harmonic motion.</p> <p><b>Physics 6.2 – Describe</b> the electromagnetic spectrum in terms of frequency and wavelength and identify the location of radio waves, microwaves, infrared radiation, visible light, ultraviolet rays, x-rays, and gamma rays on the spectrum.</p>	
<b>Unit/Topic./Lesson</b>	
Color Color spectrum Color by reflection Color by transmission Sunlight Complementary colors Mixing colored pigment Why the sky is blue Why sunsets are red Why water is greenish-blue Atomic spectra	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Explain</b> why white and black are not true colors</p> <p><b>Describe</b> how the reflection of light affects an object's color</p> <p><b>Describe</b> what determines whether a material reflects, transmits or absorbs light of a particular color</p> <p><b>Describe</b> white light</p> <p><b>Explain</b> that color television tubes produce only red, green, and blue light</p> <p><b>Define</b> complementary colors</p> <p><b>Describe</b> color mixing by subtraction and by addition</p> <p><b>Explain</b> why the sky is blue, why sunsets are red, and why water is greenish-blue</p> <p><b>Explain</b> how a spectrum can be used to identify the presence of an element</p>	How do we see colors?
	<b>Labs/Demonstrations/Handouts</b>
	<p><b>Demo:</b> Mixing colored light</p>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>Hewitt Conceptual Physics (1997) Chapter 28</li> <li>Content Outline WS</li> <li>Transparency Activity WS</li> <li>Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>Power Point Presentations</li> <li>Virtual Labs CD-ROM</li> <li>Internet labs and resources</li> </ul>

Week 26	
<b>Performance Standards</b>	
<p><b>Physics 4.4 – Describe</b> the basic principles of reflection, refraction, and diffraction of waves. <b>Explain</b> the relationship between the speed of a sound wave and the medium it travels through</p>	
<b>Unit/Topic./Lesson</b>	
Reflection and Refraction Law of Reflection Mirrors Diffuse reflection Reflection of Sound Refraction Refraction of Sound Atmospheric Refraction Dispersion in a prism The Rainbow Total internal reflection	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> what happens to light when it strikes different materials</p> <p><b>Describe</b> the law of reflection</p> <p><b>Explain</b> why a mirror forms a virtual image</p> <p><b>Describe</b> diffuse reflection</p> <p><b>Give examples</b> of ways to control reflected sound</p> <p><b>Explain</b> the change in direction of a wave when it crosses a boundary between media</p> <p><b>Describe</b> the effects of refraction of sound waves</p> <p><b>Describe</b> the effects of refraction of light</p> <p><b>Explain</b> how mirages are formed</p> <p><b>Describe</b> how a rainbow is formed</p> <p><b>Describe</b> total internal reflection, its effects, and its applications</p>	What are interference and diffraction?
	<b>Labs/Demonstrations/Handouts</b>
	<p><b>Demo:</b> Refraction of light</p>

Chapter 30 Review Chapter 30 Problems Plug & Chug, Think & Explain, Think & Solve Practice sheets - Constructing images through Ray Diagrams Test: Chapter 29 & 30	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 28	
<b>Performance Standards</b>	
<p><b>Physics 5.1 – Recognize</b> that an electric charge tends to be static on insulators and can move on conductors, and that mechanical energy can produce charge separation.  <b>Physics 5.4 – Describe</b> conceptually the attractive or repulsive forces between objects relative to their charges and the distance between them (Coulomb’s law).</p>	
<b>Unit/Topic./Lesson</b>	
Electrostatics Electrical forces and Charges Conservation of Charge Coulomb’s Law Conductors and Insulators Charging by Friction and contact Charging by induction Charge polarization	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> electrical forces between objects  <b>Explain</b> how an object becomes (a) positively charged and (b) negatively charged  <b>Describe</b> Coulomb’s law  <b>Distinguish</b> between a conductor and an insulator  <b>Describe</b> how an insulator can be charged by friction and by contact  <b>Describe</b> how a conductor can be charged without contact  <b>Describe</b> how an insulator can be charged by charge polarization</p>	What are electric charges and electric forces?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 32</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>

Week 30	
<b>Performance Standards</b>	
<b>Physics 5.2 – Develop</b> a qualitative and quantitative understanding of current, voltage, resistance, and the connection between them (Ohm’s law).	
<b>Physics 5.5 – Explain</b> how electric current is a flow of charge caused by a potential difference (voltage) and how power is equal to current multiplied by voltage.	
<b>Unit/Topic./Lesson</b>	
Electric Current Flow of Charge Electric current Voltage sources Electric Resistance Ohm’s law and electric shock Direct current and alternating current Converting AC to DC The speed of electrons in a circuit The source of electrons in a circuit Electric power	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> the flow of electric charge</p> <p><b>Describe</b> what is happening inside a current-carrying wire</p> <p><b>Give examples</b> of voltage sources that can maintain a potential difference in a circuit</p> <p><b>Describe</b> the factors that affect the resistance of a wire</p> <p><b>Describe</b> Ohm’s law</p> <p><b>Explain</b> the causes of electric shock</p> <p><b>Distinguish</b> between DC and AC and describe how AC is converted to DC</p> <p><b>Compare</b> the drift speed of conduction electrons in a current-carrying wire to the signal speed of changes in current</p> <p><b>Compare</b> the motion of electrons in a wire carrying AC to the flow of energy through the wire</p> <p><b>Relate</b> the electric power used by a device to the current and voltage</p>	What are series and parallel circuits?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Labs:</b> Circuits
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 34</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 34 Review Chapter 34 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 34 Worksheets	<p><b>Completed by:</b></p> <p><b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster</p>

Week 31	
<b>Performance Standards</b>	
<p><b>Physics 5.2 – Develop</b> a qualitative and quantitative understanding of current, voltage, resistance, and the connection between them (Ohm’s law).</p> <p><b>Physics 5.3 – Analyze</b> simple arrangements of electrical components in both series and parallel circuits. <b>Recognize</b> symbols and understand the functions of common circuit elements in a schematic diagram</p> <p><b>Physics 5.5 – Explain</b> how electric current is a flow of charge caused by a potential difference (voltage) and how power is equal to current multiplied by voltage.</p>	
<b>Unit/Topic./Lesson</b>	
Electric circuits A battery and a bulb Electric circuits Series circuits Parallel circuits Schematic diagrams	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Describe</b> the configuration of a working circuit</p> <p><b>Distinguish</b> between series and parallel circuits</p> <p><b>Describe</b> the characteristics of series connections and of parallel connections</p> <p><b>Interpret</b> circuit diagrams</p>	What is a circuit?
	<b>Labs/Demonstrations/Handouts</b>
	<b>Labs:</b> Circuits
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 35</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 35 Review Chapter 35 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 35 Worksheets Lab Sheet	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 32	
<b>Performance Standards</b>	
<p><b>Physics 5.2 – Develop</b> a qualitative and quantitative understanding of current, voltage, resistance, and the connection between them (Ohm’s law).</p> <p><b>Physics 5.3 – Analyze</b> simple arrangements of electrical components in both series and parallel circuits. <b>Recognize</b> symbols and understand the functions of common circuit elements in a schematic diagram</p> <p><b>Physics 5.5 – Explain</b> how electric current is a flow of charge caused by a potential difference (voltage) and how power is equal to current multiplied by voltage.</p>	
<b>Unit/Topic./Lesson</b>	
Electric circuits Combining resistors in a compound circuit Parallel circuits and overloading	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Determine</b> the equivalent resistance of circuits having two or more resistors</p> <p><b>Explain</b> the cause and prevention of overloading household circuits</p>	What happens in a compound circuit?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 35</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 35 Review Chapter 35 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 35 Worksheets Test: Chapter 34 & 35	<b>Completed by:</b>  <b>Comments:</b> <i>Alternative Evaluation:</i> Paper, Project, Poster

Week 33	
<b>Performance Standards</b>	
<p><b>Physics 5.6 – Recognize</b> that moving electric charges produce magnetic forces and moving magnets produce electric forces. <b>Recognize</b> that the interplay of electric and magnetic forces is the basis for electric motors, generators, and other technologies.</p>	
<b>Unit/Topic./Lesson</b>	
Magnetism Magnetic poles Magnetic fields The nature of a magnetic field Magnetic domains Electric currents and magnetic fields	
<b>Objectives (Students Will...)</b> <b>Compare and contrast</b> magnetic poles and electric charges <b>Use</b> iron filings to <b>interpret</b> the strength of a magnetic field at different points near a magnet <b>Relate</b> the motion of electrons within a material to the ability of the material to become a magnet <b>Describe</b> what happens to the magnetic domains of iron in a presence of a strong magnet <b>Describe</b> the magnetic field produced by a current-carrying wire <b>Describe</b> how a magnetic field exerts a force on a charged particle in the field	<b>Essential Question</b> What is a magnet?  <b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b> <ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 36</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<b>Media Resources</b> <ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b> Chapter 36 Review Chapter 36 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 36 Worksheets	<b>Completion date:</b>  <b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 34	
<b>Performance Standards</b>	
<p><b>Physics 5.6 – Recognize</b> that moving electric charges produce magnetic forces and moving magnets produce electric forces. <b>Recognize</b> that the interplay of electric and magnetic forces is the basis for electric motors, generators, and other technologies.</p>	
<b>Unit/Topic./Lesson</b>	
Magnetism Magnetic forces on moving charged particles Magnetic forces on current-carrying wires Meters to motors The Earth’s magnetic field	
<b>Objectives (Students Will...)</b> <b>Describe</b> some practical applications of a magnetic field exerting a force on a current-carrying wire <b>Describe</b> how a galvanometer and a motor work <b>Suggest</b> possible causes for Earth’s magnetic field <b>Describe</b> how voltage is induced in a coil of wire <b>State and explain</b> Faraday’s law <b>Describe</b> how a generator works	<b>Essential Question</b> How are current and magnets related?  <b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b> <ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 36</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<b>Media Resources</b> <ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b> Chapter 36 Review Chapter 36 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 36 Worksheets	<b>Completion date:</b>  <b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 35	
<b>Performance Standards</b>	
<p><b>Physics 5.6 – Recognize</b> that moving electric charges produce magnetic forces and moving magnets produce electric forces. <b>Recognize</b> that the interplay of electric and magnetic forces is the basis for electric motors, generators, and other technologies.</p>	
<b>Unit/Topic./Lesson</b>	
Electromagnetic Induction Faraday’s Law Generators and alternating current Motor and Generator comparison Transformers	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Compare and contrast</b> motors and generators  <b>Describe</b> how a transformer works  <b>Explain</b> why transformers are used for transmission of electric power</p>	How are magnetism and electricity related?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 37</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 37 Review Chapter 37 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 37 Worksheets	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster

Week 36	
<b>Performance Standards</b>	
<p><b>Physics 5.6 – Recognize</b> that moving electric charges produce magnetic forces and moving magnets produce electric forces. <b>Recognize</b> that the interplay of electric and magnetic forces is the basis for electric motors, generators, and other technologies.</p>	
<b>Unit/Topic./Lesson</b>	
Electromagnetic Induction Power transmission Induction of electric and magnetic fields Electromagnetic waves	
<b>Objectives (Students Will...)</b>	<b>Essential Question</b>
<p><b>Relate</b> the magnitude and direction of an induced electric field to the inducing magnetic field, and vice versa  <b>Describe</b> electromagnetic waves</p>	What are transformers?
	<b>Labs/Demonstrations/Handouts</b>
<b>Teacher Resources</b>	<b>Media Resources</b>
<ul style="list-style-type: none"> <li>• Hewitt Conceptual Physics (1997) Chapter 37</li> <li>• Content Outline WS</li> <li>• Transparency Activity WS</li> <li>• Enrichment/reinforcement WS</li> </ul>	<ul style="list-style-type: none"> <li>• Power Point Presentations</li> <li>• Virtual Labs CD-ROM</li> <li>• Internet labs and resources</li> </ul>
<b>Assessment Activities</b>	<b>Completion date:</b>
Chapter 37 Review Chapter 37 Problems Plug & Chug, Think & Explain, Think & Solve Chapter 37 Worksheets Test: Chapter 36 & 37	<b>Completed by:</b>  <b>Comments: <i>Alternative Evaluation:</i></b> Paper, Project, Poster
